NATURALPOINT TAKES VIDEOGAME HEAD TRACKING TO THE NEXT LEVEL WITH TRACKIR2

TrackIR2 Brings New Levels of Realism to PC Gaming, Including Flight Simulation

Corvallis, Ore.--November 5, 2003. NaturalPoint, the industry leader in head tracking game control systems, announces its next generation game controller, the TrackIR2™. With the award-winning TrackIR2 head tracking system, desktop gamers can use natural head motion to look around their virtual environment without ever looking away from the screen, freeing up precious joystick buttons and mouse axes for other uses.

The TrackIR2, at a blazingly fast 100 frames per second, has almost twice the frame rate and 4x the data throughput of the previous model, the TrackIR. This means greater accuracy and smoother movement in-game, and makes the TrackIR2 more compatible with the high refresh rates and resolutions of state-of-the-art computer monitors.

Jim Richardson, TrackIR2's creator says, "Now, with its blistering speed and razor-sharp accuracy, TrackIR2 can bring new levels of immersion and excitement to a *much* wider variety of titles, including driving and flight simulator titles." Several more titles have added immersion to their virtual cockpits; **Microsoft Flight Simulator 2004** now includes direct support for TrackIR2™! The much anticipated release of **Lock-On: Modern Air Combat** and **Falcon 4** will include full TrackIR Enhanced™ support.

TrackIR2's new features include:

- Full USB hot plug capability
- USB suspend mode compatible
- New image display system with colored objects
- Cool new case
- Upgradeable system for future enhancements (such as multi-TrackIR displays)

Improvements over the current generation system include:

- High speed digital imager (100 FP/S) a full 66% increase
- 4X image data throughput
- Improved smoothing algorithm
- Increased background/sunlight image tolerance
- Improved installation procedure

For more information on the TrackIR2, visit www.trackir.com , or call 1-888-865-5535.

About NaturalPoint:

Based in Corvallis, Oregon, NaturalPoint is the creator and manufacturer of the TrackIR and smart-NAV product lines. NaturalPoint specializes in providing innovative control solutions for computers, video games, LCD projectors, and television set-top boxes.

About the TrackIR2:

The TrackIR is a one of a kind gaming controller designed to allow accurate control of characters and environments through natural head movements. It's easy-to-use interface and unobtrusive form factor has made it the premiere head-tracking controller. The TrackIR2 is available from leading gaming resellers including eDimensional, AVSim, PC Aviator, and NaturalPoint's own online store.
